Medisorb P SILVER Absorbent dressing with silver

Managing the infection

- vapour-permeable polyurethane film constituting the outer layer of the dressing allows for gaseous exchange and protects against external factors
- polyurethane foam layer absorbs excess exudate and protects the wound against mechanical damage
- active layer consisting of chitosan and silver provides an aseptic environment in the wound and creates favourable conditions for wound healing

Application:

- moderate to high exuding wounds
- infected wounds or at risk of secondary infection
- shin ulcers
- pressure ulcer wounds
- postoperative wounds
- traumatic extensive injuries
- burn wounds
- wounds accompanying the so-called diabetic foot

Types:

- sterile
