Matodrape sets

OP-sets consist of drapes that allow to cover the patient in order to delimit the OP-field during a surgical procedure, ensuring the safety for the patient and the medical staff, and of various additional elements that facilitate the performance of the operation.

Simple design of the drapes makes it possible to drape the patient a quick and effective way. To facilitate the draping the drapes are marked with pictograms, indicating the unfolding direction.

Additional elements that facilitate or accelerate the preparation of the operating room include: covers (for tabletops, limbs, cables and medical equipment), pouches for liquids, adhesive medical tapes, cable organisers, hand towels, incise film and medical clothing.
The OP-drapes are made of the highest quality raw materials that meet the requirements of EN 13795, thus ensuring safety while using.
