

OFFER FOR STERILISATION

Our knowledge and skills, based on long-time experience, motivated and highly-qualified employees, as well as modern production facilities, enable us to produce top-quality packaging for and after sterilisation. We are aware of the importance of its task – it should protect sterile items from contamination.

The production environment is under constant and strict control throughout the production process to ensure the safety and high quality of our packaging. In this way, it is possible to exclude the presence of transmissible microorganisms such as fungi, spores, viruses and bacteria.

The safety of using Safe Medical Packaging is confirmed by our experienced lab employees, who meticulously test each group of manufactured products for strength, resistance to damage and temperature, tightness and the quality of opening the packaging.

All Safe Medical Packaging used for sterilisation and packaging for storage after sterilisation are manufactured in line with standardised and approved production processes and European Union directives and regulations.

We have a certified quality management system in line with the following standards:

EN ISO 9001

EN ISO 13485

Therefore, Safe Medical Packaging can be used in hospitals and doctor's surgeries without reservation. They are ideal for use in the industry as well.

OUR MAIN ADVANTAGES

HIGH STANDARDS

compliance with EU directives and regulations

RELIABILITY

production safety

PRODUCTION INSIDE THE TZMO GROUP

speed and competitiveness

RESPONSIBILITY

competence and customer orientation

FLEXIBILITY

a company with a long tradition which combines experience with the latest technology

As an experienced company operating in international markets, we can implement innovative packaging solutions that are adjusted to our clients' needs and the market demand. We offer packaging made of various raw materials – film, paper and nonwoven.

A wide range of products enables us to always offer the most suitable product!
